

Use Cases:

User Management:

Manage Profile: The user can update their profile information (e.g., email, first name, last name).

View Automations: The user can view a list of all their automations.

Create Automation: The user can create a new automation with specific triggers, listeners, and keywords.

Edit Automation: The user can modify an existing automation (e.g., change triggers, update keywords).

Delete Automation: The user can delete an automation.

Run Automation: The user can manually trigger an automation to execute its tasks (e.g., send DMs, post content).

Subscription Management:

Manage Subscription: The user can view and manage their subscription details.

Upgrade/Downgrade Plan: The user can change their subscription plan (e.g., from FREE to PRO).

View Billing Info: The user can view billing details and payment history.

Integrations Management:

Manage Integrations: The user can view and manage their connected integrations (e.g., Instagram).

Connect/Disconnect Integration: The user can connect or disconnect an integration (e.g., Instagram).

View Integration Details: The user can view details about a specific integration (e.g., token, expiration date).

Automation Management:

View DMs: The user can view direct messages sent or received by an automation.

View Posts: The user can view posts created by an automation.

Configure Listener: The user can configure the listener for an automation (e.g., set up prompts, reply rules).

Configure Trigger: The user can configure triggers for an automation (e.g., time-based, event-based).

Add Keyword: The user can add keywords to an automation for triggering specific actions.

Remove Keyword: The user can remove keywords from an automation.

View Keywords: The user can view all keywords associated with an automation.

Relationships Between Use Cases:

Extend Relationships:

Manage Subscription extends to Upgrade/Downgrade Plan and View Billing Info: These are specific actions within managing a subscription.

Manage Integrations extends to Connect/Disconnect Integration and View Integration Details: These are specific actions within managing integrations.

Configure Listener, Configure Trigger, Add Keyword, and Remove Keyword extend to Run Automation: These configurations are prerequisites for running an automation.
