User:

One-to-One with Subscription (a user can have at most one subscription).

One-to-Many with Integrations (a user can have multiple integrations).

One-to-Many with Automation (a user can create multiple automations).

Automation:

One-to-Many with Dms (an automation can send/receive multiple DMs).

One-to-Many with Post (an automation can create multiple posts).

One-to-One with Listener (an automation can have one listener configuration).

One-to-Many with Trigger (an automation can have multiple triggers).

One-to-Many with Keyword (an automation can have multiple keywords).

Unique Constraints:

The Keyword model has a unique constraint on [automationId, word] to ensure no duplicate keywords for the same automation.
